18TH ANNUAL CHAROLAIS & ANGUS BULL SALE

Friday 18th August 2023 at 1pm
"Wakefield", Wollomombi, NSW

"Wakefield" is located approximately 55km
East of Armidale on the Waterfall Way.

- * 141km South West of Grafton.
- * 35km West of Ebor.

The Sale will also be Interfaced
via Elite Livestock Auctions

Visit the website for more information:

We are pleased to welcome you to the Eighteenth Annual Wakefield Sale.

It is great to see some normality return after Covid 19 and floods. While cattle prices have corrected to an extent due to a range of factors including processing chain congestion and a dryer season in some areas, I am still very positive about the longer-term outlook. My feeling is that prices are at the bottom and demand will strengthen into the spring. We are already seeing decreased wait times for bookings on over the hooks cattle, but a lot will depend on seasonal conditions in the second half of the year. Interestingly there have already been some unusual rain events moving down through central Australia and spilling into Queensland and NSW. I have never been a big believer in long range weather forecasting and would rather react to conditions as they occur. Of course, the usual rules of having cash reserves or fodder on hand and cautious stocking rates are always a good idea. Some investment into genetics to produce fast growing, efficient and sought after cattle also helps.

There is little doubt that we will see more emphasis on methane emissions with the industry's goal of Carbon Neutrality by 2030 and it will be interesting to see how this develops. My feeling is that from a breeding point of view higher yielding and efficient cattle that spend less days on feed should also produce less methane. It is interesting to note that an animal requires up to six times more feed to lay down a kilogram of fat than needed to lay down a kilogram of muscle.

We have once again been spending a lot of 2023 catching up on repairs and maintenance to fences, yards and spraying. Jenny's brother Keith has been helping us for the last 12 months or so and it is amazing what an extra pair of hands can do. We have finished some upgrades to the stockyards at the sale barn with just the bail head to go-so if anybody has good or bad stories on bail heads I'd be very happy to have a chat! I think we may be getting a little spoilt with covered yards, but we were reminded recently when we were preg testing in the rain at the one set of yards without a roof.

While the show ring is not our major focus it can be a good benchmark for your own herd and an opportunity to see some other genetics on display. Late last year when Wakefield Amaze 38 calved down again as an eight year old cow and not having been in a show ring since winning Supreme Interbreed Female at the Ekka in 2019 we decided she deserved a chance at the Sydney Royal. Once again, she did not let us down and was Supreme Charolais Exhibit ending her cow and calf show career unbeaten in the Charolais ring! A big thank you to Casey and Nigel Wieck for all the work you do for us!

It was a pleasure to attend and once again sponsor the Grafton weaner sale and have a chance to see an outstanding line up of young cattle. Congratulations to the vendors on the quality of the weaners and, even with a tightening of feed supply, we were very impressed with the quality of the cattle on display. It is tremendous to see producers being rewarded for the effort they are putting into their breeding programs.

On the family front Chris and Lucy have had a baby girl born on the 3rd of April. Annie is our first Grandchild and is an absolute delight! She is already being introduced to cattle work and gave us a hand selecting our Lot orders this year albeit most of the time she was asleep. They continue to improve their farm at Dorrigo and are busy running both farm stays. The Good Life Beef business is expanding and they are continuing to lease 1200 acres closer to Armidale and have secured another 1600 acres of lease country next door to Wakefield. Chris is finishing up work at Grazag and is coming home to concentrate on their own business and help part time at Wakefield and Chandler. We are all very excited to have him on the team!

Our youngest daughter Claire has settled back into life in Australia. She is currently doing two days a week at a local Armidale practice, an increasing amount of local vet work and has moved into her newly renovated house at Chandler. She has just started building a new clinic beside her house and is hoping to be open for business later this year. We are very excited to have Wollomombi Veterinary Services here and think it will be a great asset to the district. We are very grateful to our family for everything they do for us and proud that they see a future in agriculture.

Over the last 12 months, once again, there have been many outstanding results in feedlots, sales, abattoirs and stud bull auctions from stock sired by Wakefield bulls. The overwhelming comments have been how well the bulls are performing under tough conditions, their longevity, and the market suitability of their progeny. We would like to thank our bull buyers for their loyalty to our program.

The Wakefield bull breeding program is tailored to produce calves which will fit the specifications of a wide range of markets and remember we are a commercial operation as well and have a good understanding of what is required. We appreciate feedback from our clients on how our bulls are performing as it helps us to make more informed breeding decisions.

Wakefield has one of the most genetically diverse herds recorded, particularly in the Charolais, as a result of our emphasis on targeting proven female lines. We have introduced embryos from a range of herds and maintain cow lines we have identified as breed leaders. There is no doubt in our mind that to breed good bulls it is critical to have a lot of depth in the cow herd and we are not afraid to use older genetics if they have the runs on the board.

Our emphasis is on breeding tough cattle that are at the top of the breed for dollars earned. The bulls this year have been prepared on planted pasture grass paddocks with very limited or no grain assistance. They will present in a forward, but not fat condition and we are very happy with the way they are shaping up. As always, we will not compromise by heavily grain feeding our bulls. We are not one of the breeders whose bulls are the best you will ever see them on sale day! We think this is critical to the longevity of the bull and his ability to hold condition under tougher conditions. Quite a few of our bulls are jumped directly off the truck straight into client's cow herds!

We look forward to seeing you on Friday the 18th of August at our "all weather" sale complex. Complimentary lunch will be available prior to the sale, which commences at 1pm. Remember if you would like any more information we are only a phone call away and on the day, pack a jumper and bring your catalogue!

The Frizell Family

STUD HISTORY

This year we celebrate 163 years of continuous cattle breeding as Wakefield has been held in the same family since 1860.

Wakefield began breeding Charolais in 1970 when the breed was first introduced into Australia and used most of the early French bulls in grading up programs until currently a herd of 600 Charolais, Charolais composite and Angus females are maintained. Through the years there have been selected introductions of stud Charolais females, purchase of embryos, regular artificial insemination and embryo transfer programs.

We have been breeding Angus for our composite program for many years and for the last 17 years have been building our registered Angus herd. In combination with upgrading existing cows to APR status, large scale artificial insemination/ embryo transfer programs and introduction of industry leading embryos the Angus herd is growing rapidly.

Our emphasis is to produce bulls to increase profit in our client's herds and the calves born over the next few years will be sired by a smaller number of select sires. We think that Canadian, French and Australian Charolais sires provide the balance of growth and carcass characteristics we require. Angus sires are being sourced from the US and Australia.

Wakefield was amongst the pioneers in the use of Charolais Composite bulls and it is pleasing to see Charolais being recognised as the "breed of choice" in crossbreeding programs. We have decided to concentrate more on our purebred lines as they seem to provide more uniformity in their progeny and keep breeding programs simpler for our clients. A lot of herds have used composite bulls as a stepping stone into the Charolais breed and have quickly realised the financial benefits of crossbreeding.

Our aim is to breed moderate birth weight Charolais while maintaining good growth and carcass characteristics. Wakefield is a Group Breedplan member so EBVs are available on all purebred bulls and our herd is based around selecting for commercially important traits, such as yield, growth and feed efficiency. We are bull breeders not bull feeders. Structural correctness is very important to us and we like to have feedback from our clients to make sure the bulls are performing well under all conditions.

We are proud of our sale bulls and can recommend them to you as herd improvers. They can be purchased in the knowledge that they will perform well under commercial conditions and are fully guaranteed.

SALE INFORMATION

REFRESHMENTS - Complimentary lunch and refreshments will be provided by Wakefield.

INSPECTION - Inspection can be made prior to sale day by appointment with the agents or the vendors. Bulls will be available for inspection on sale day from 10am.

UNABLE TO ATTEND - Online bidding and live streaming with Elite Livestock Auctions using a Starlink connection will be available throughout the sale. Over the phone bidding by arrangement with the agents or vendors is also available and private inspections are welcomed and encouraged at any time prior to the sale.

TREATMENT SCHEDULE BULLS

7/7/2023

- Leptoshield vaccination
- Pestivirus vaccination
- Vibriosis vaccination
- Three-day sickness vaccination

6/8/2023

- Lepto booster (booster required yearly)
- Pestivirus booster (booster required yearly)
- Three-day sickness booster (booster required yearly)
- Vibriosis booster (booster required yearly)
- 8 in 1 booster (booster required yearly)
- Multimin injection

QUALITY CONTROL

- Pestivirus tested negative (hair sample)
- Semen tested
- Bovilus MH vaccinated at weaning
- Johnes Status – JBAS 7
- EU Accredited herd
- Angus bulls AM, NH, CA and DD status tested and Sire verified.

GUARANTEE - In the unlikely event of infertility, provided it is not caused by injury, stress or disease contracted post sale, we will endeavour to supply a satisfactory replacement if available or issue a credit to equal the purchase price minus the salvage value to be used at future Wakefield sales. The purchaser will provide a veterinarian's certificate within six months of the purchase date.

TRANSPORT - Carriers will be attendance at the sale. We take a keen interest in arranging the most favourable transport for your purchases. This year we are offering free freight from Wakefield to Grafton, Casino, Walcha, Armidale, Kempsey and Lismore saleyards, with the carrier of **our** choice. Delivery arrangements are to be made in writing on the buyers instruction form provided in the back of this catalogue.

STUD TRANSFERS - All registered animals are eligible for transfer. For transfer of animals purchasers must be members of the relevant breed society.

REBATE - 2% rebate available to outside agents accompanying potential purchasers and settling for purchases within 7 days of receipt of invoice.

NOTICE TO BUYERS - All lots will be sold subject to the usual terms and conditions governing auction sales. Phone service is available at sale complex. Please contact the vendors or your preferred agent on sale day to arrange phone hook-up. This year's sale is also interfaced with Elite Livestock Auctions.

CARING FOR YOUR BULL

This year's sale bulls range from 18 - 24 months of age and will need to be managed accordingly.

There are many advantages in buying younger bulls. You see the bull closer to the weights you are likely to be marketing your finished cattle at. You will get an extra year of use from your bull and most importantly you are getting the 'pick of the crop'.

In our experience the best bulls will be good at all stages of growth and not only when they are mature. You can be confident that a young bull with eye appeal will only get better! But younger bulls are still growing quickly and need enough feed to maintain their growth pattern while settling your cows.

Younger bulls can be introduced into paddocks with older bulls but remember he will be on the bottom of the pecking order and will need room to avoid the others. His nutritional requirements will be greater than a mature bull so make sure he has adequate feed.

Our bulls are used to running in a mob and will arrive in a strange environment at the purchaser's property. Unload him and if possible make sure he has a steer or cow as a companion straight away.

Our cattle are mustered on motorbikes and are handled gently but firmly. They may need to be introduced to horses. The bulls have been trained to respect electric fencing.

HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Welcome to the new age of selling livestock in
Australia and "Happy Bidding"

-  1 Simply go to www.elitelivestockauctions.com.au using your desktop, laptop, iPad, iPhone or android device
-  2 Click on the "Sign Up" page / link
-  3 Create a bidding profile using the bidder registration page.
(You can either register as a livestock agent, company or private buyer.)
-  4 Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue
-  5 Click "Register"
-  6 You will then be notified by email that an account has been created

-  7 Once an account has been created you are all "Set to Bid"
-  8 Each auction can then be viewed by clicking "Live Auction" logo on the Elite Livestock Auctions website
-  9 Once you receive email notification that your account has been created please go to the sale you wish to bid at and click "Request to Bid"
-  10 The sale agents will then approve your application to bid and on the sale catalogue you will see "✓ Bid Request Approved"
-  11 On Sale day simply login, click "Enter Auction" on the catalogue page and you can start bidding.
(There is no need for software download)
-  12 At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Charolais BREEDPLAN EBV Explanations

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above a value of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, Charolais BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcass merit and docility. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

- **CE % Dir = Direct Calving Ease** - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

- **CE % Daughters = Daughters' Calving Ease** - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination and hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Carcass Weight EBV (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.

Eye Muscle Area EBV (sq cm) indicates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Rump Fat EBV (mm) is an indicator of the genetic differences between animals in fat depth at the p8 rump site in a standard 300kg steer carcass. Sires with low, or negative, fat EBV are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Rib Fat EBV (mm) is an indicator of the genetic differences between animals in fat depth at the 12/13th rib site in a standard 300kg steer carcass. More positive or more negative Rib Fat EBVs may be more favourable, depending on your breeding goals relating to the finishing ability of your animals.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300kg steer carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg steer carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index.

The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

Charolais selection indices are calculated for two standard market specifications – Domestic Terminal and Northern Maternal - and are designed to optimise profit outcomes from commercial production systems. More information is available on Charolais Selection Indices.

Domestic Terminal Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial herd where Charolais bulls are joined with a British breed cow base (e.g. Angus)

targeting the domestic trade. This index assumes all progeny will be marketed with steers finished in the feedlot for 90 days and weighing 450 kg (250 kg HSCW and 7 mm P8 fat depth) when marketed at 12 months. Heifers will be in the feedlot for 75 days and weigh 430 kg (230 kg HSCW and 9 mm P8 fat depth) at 12 months. In response to industry feedback, positive emphasis has been placed on finishing ability.

Northern Maternal Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for a typical commercial herd where Charolais bulls are joined with Bos indicus cows in Northern Australia targeting the grass fed Jap Ox market. Selected heifers are retained for breeding and so maternal traits are of importance. Steers target 650 kg live weight (360 kg HSCW and 12 mm P8 fat depth) and heifers 630 kg (340 kg HSCW and 14 mm P8 fat depth), at 26 months of age. In response to industry feedback; positive emphasis has been placed on finishing ability.

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

- **less than 50%:** Low accuracy. EBVs are preliminary and could change substantially as more performance information becomes available.
- **50-74%:** Medium accuracy. Usually based on the animal's own records and pedigree.
- **75-90%:** Medium-high accuracy. Some progeny information included. EBVs may change with addition of more progeny data.
- **more than 90%:** High accuracy estimate of the animal's true breeding value.

As a rule, animals should be compared on EBVs regardless of accuracy. However, where two animals have similar EBVs the one with higher accuracy could be the safer choice, assuming other factors are equal.

COMMENTS: Silverstream Manhattan has been used at Wakefield for his correct phenotype and muscle definition. The progeny are outstanding and have good soft skin with great conformation. They have plenty of thickness across the topline on long bodies. Manhattan is still being used in our herd for his growth, natural finishing ability and type. We love the heads on the Manhattan animals...good broad muzzles make for an easy doing animal, and he's giving us plenty of those. **6 sons sell at the sale.**

COMMENTS: Lorax is a homozygous polled, red factor by by LT Ledger and a real favourite here at Wakefield. He is a tremendously quiet boy that is giving us thick, meaty bulls and feminine wedge shaped females. His full flush sister Wakefield Friesia L987E is a very stylish cow that has been in our show team, she milks well and is very fertile and was the dam of the top priced bull Wakefield Right On Time in 2021. These are some of the last Lorax sons to sell as he only has a handful of sons for next years sale. **3 sons sell at the sale.**

COMMENTS: Wakefield Quality Assured Q241 is a Venturon Maximum Impact son that we thought was the best Impact son in the draft in 2019. His dam is from the Liberty line that are larger framed, plenty of stretch with soft slick coats. **4 sons sell at the sale.**

ANGUS REFERENCE SIREs

Angus Society
Suffix DNA Key:

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA
SV : the sire has been verified by DNA
DV : the dam has been verified by DNA
: DNA verification has not been conducted

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

COMMENTS: Shockwave starts our sale this year. He is a free moving, scurred, bull with plenty of muscle. He is a long bodied bull that has tremendous spring of rib. He is an ET calf that we purchased as an embryo by Canadian sire Harvie Jager out of a reputable cow line in Fernvale Chiffon. We would recommend that he be used on mature females. Plenty of power and meat in this young bull. We would expect this bull to produce for all beef operations.

COMMENTS: An outstanding slick coated son of Silverstream Manhattan. Silverstream is a scurred bull with a smooth muscle pattern and a wonderful topline. He has a natural finishing ability while maintaining the muscle pattern that Charolais are renowned for. He is a long, free-moving, soft and true-to-type Charolais. His dam Amaze 9 is a full flush sister to Amaze 10, the dam of the Supreme Charolais Exhibit at Sydney Royal Easter Show 2023 Amaze 38. Amaze 9 was the dam of the top price bull at Wakefield last year Raise The Bar selling to Myona Charolais.

COMMENTS: This outstanding polled Wakefield Noble N511 son catches your eye every time you go into the paddock. He has good conformation, standing on good feet and legs with tremendous muscle set and thickness. Starburst has a smooth shoulder set and great softness to a meaty bull. His calving ease and birth weight data is exceptional as well as his carcass data having plenty of muscle with positive fats. Well worth your consideration!

COMMENTS: What's not to like about this young fellow, make some noise for Skyfall! This is a Lorax son that has plenty of muscle and power as well as a natural finishing ability, what a beauty! This slick coated, scurred, red factor bull has tremendous growth and power, a smooth muscle pattern with plenty of body length. He has plenty of capacity and carries himself very well. His dam is extremely fertile and milks very well. Would suit from vealer operations to jap ox. Don't miss out on an outstanding young bull.

COMMENTS: Special Red is a red factor, scurred bull by NZ sire Silverstream Manhattan, out of the Wallah cow line that produce thick, well finished progeny. He has capacity with good spring of rib while maintaining incredible power and thickness. This bull has above average growth and a positive set of caracase data. He has a natural finishing ability while maintaining the muscle pattern that Charolais are renowned for. He is a soft and true-to-type Charolais. This bull would breed show steers and vealers until the cow's come home. Don't miss this one.

COMMENTS: Sandalwood is a polled, red factor bull by Wakefield Lorax. Let's see who gets lucky! He is a true to type Charolais, full of power with tremendous length of body, a natural finishing ability and a great top line. He has great calving ease and birth weight figures and would suit many beef operations.

COMMENTS: Son Of A Gun is a scurred, red factor bull by Australian sire Kandanga Valley Novak. This bull has plenty of muscle, explosive growth, body length and finishing ability. His carcass data is very impressive with high EMA and well above average growth figures. He would fit into many cattle operations. He ranks very well for retail beef yield and at the end of the day that's what we get paid for ...YIELD!

COMMENTS: Sherlock is another red factor, homozygous polled, son of calving ease specialist sire Wakefield Noble N511. The Noble progeny are true to Charolais type with good topline, plenty of muscle and powerful heads. Did I mention the calving on the Noble sons, it's amazing. Will add finishing ability with good growth and a positive set of carcass data. This young bull has good calving ease and ticks all the boxes. Drop him in your paddock today and see the difference a Charolais can make on your herd, it's elementary my dear Watson!

COMMENTS: Sundowner is a slick coated long bodied, deep flanked bull that has good neck extension. We bought him as an embryo and he has some special Canadian genetics in his pedigree in LT Wyoming Wind. We have use S69 in our herd to back up some AI programs and the calves are arriving now. We are very happy with them, they are born easily with slick coats and we look forward to seeing how they grow out. Sundowner is a polled bull that has a wonderful temperament, oozes eye appeal and is phenotypically correct. Make a Quid with this bull.

COMMENTS: Another exceptional bull that is homozygous polled out of a bred in the purple cow line in Amaze P780. Sizzler has a tremendous top line with plenty of punch but he exhibits a lovely softnes to him. Sizzler would suit for stud duties as he is very correct and stands on good feet. He has positive carcass data and is very easy on the eye! His dam is from the favourite cow line Amaze 10. P780 is very impressive to look at, with a wonderful udder, great milk, she's fertile and produces a punchy, meaty calf every year. Don't overlook this fellow. Jen's pick

COMMENTS: Stetson is a homozygous polled bull that has plenty of growth and muscle with good body length. His dam is a sweet cow that keeps producing for us. A Noble son that has terrific calving ease and birth weight figures, above average growth and positive fats. Well worth considering for that cross breeding program.

COMMENTS: Sweeney Todd is another Noble son that has plenty of growth, muscle and body length. Unlike the Demon barber his mother is a very stylish Ace daughter that is very correct and has a wonderful disposition. This bull has great eye appeal and with his growth and positive fats would suit many beef enterprises from vealer to feedlot steers. Oh, and by the way don't miss out he is homozygous polled too!

COMMENTS: An eye catching son of Ferguson Trailblazer to start the Angus sale today. He has a smooth muscle pattern, amazing growth and an easy fleshing ability on a big frame. He has tremendous length of body with plenty of punch. Wakefield Trailblazer's dam P18 is a fertile cow that never misses a beat. She is a roomy cow with good depth of flank, a well made udder and a great temperament. Don't overlook this outstanding fellow, he has been used in the Wakefield herd for the GOOD Life Beef operation and has a wonderful disposition, well worth your consideration. Top 6% for 200 & 600 day growth, top 5% for 400 day growth and low feed cost dollar index and top 10% for Angus Breeding index and top 13% for carcass weight.

COMMENTS: The only Chiltern Park Moe son on offer today, and what a cracker he is! Wakefield Moe is out of a HF Tiger daughter from the Abigail line. S764 has a wonderful temperament and was one of the heaviest weaned in his group. He has a good neck extension, smooth shoulder set and tremendous calving ease and birth weight figures that suggest he would be perfect for use on heifers. S764 is an easy fleshing bull with good body length and a slick coat. His calves should be born easily and grow well. Top 5% for calving ease direct and top 10% for low birth weight. Top 10% for rib and rump fats

COMMENTS: S830 is a Sitz Stellar son that catches your eye. This bull is packed full of meat and stands on a good frame. He is out of a Te Mania Emperor daughter N625 that has been a favourite in our herd. He is a powerful bull that moves freely and should be a tick in the right direction. Plenty of EMA, good gestation length and yield and at the end of the day, yield is what we get paid for! Top 1% for Retail beef yield and top 3% for EMA. Top 4% for gestation length and top 19% for AB Index.

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.
SV : the sire has been verified by DNA.
DV : the dam has been verified by DNA.
: DNA verification has not been conducted.
E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.
